# CS410 Course Project Progress Report: Improved Keyword Search

## Team Name: Blue Team

## Team Members: Kevin Cen, netID: kcen2

1) Which tasks have been completed?

   **Progress so far has consisted of watching/reading tutorials on Javascript and implementing browser extensions in Google Chrome. While I realize that progress has not been substantial thus far in terms of implementation, I have not had sufficient time these past couple weeks to dedicate to the course project. However with fall break and the holidays coming up, I will truly have time to dedicate to finishing the course project.**

2) Which tasks are pending?

   **Implementation of the BM25 and other text retrieval functions (if time permits) in a browser extension format. This will involve coding in Javascript, debugging and ensuring smooth functionality.**

3) Are you facing any challenges?

   **The main challenge so far has been learning how to create and code a browser extension which has taken my time so far. The secondary challenge has been time over the past couple weeks, which should be overcome given upcoming fall break/holidays and the lighter course schedule in terms of lectures & quizzes.**
